## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 5-6, filed 9 July 2008, with respect to the rejection(s) of claim(s) 3, 5-7, 9-11 under 35 USC§112 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of 35 USC§103.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1-12, 15-16 rejected under 35 U.S.C. 103(a) as being unpatentable over Yedgar (US Pat. 7,393,938).

US'938 disclosed oligomers of ceramide and sphingosine that can be used in pharmaceutical compositions. The claims differ from the reference in that specific fatty acid moiety, spacers, and arrangement of cross-linkage is claimed.

However it would have been obvious to one of ordinary skill at the time the invention was made to extrapolate these variables to obtain the instant invention. It is known that ceramide and sphingosine contain fatty acid moieties that are

conducive to the functioning of the human biological system. While not specifically listing the fatty acid moieties it would be considered routine experimentation to pick the pertinent fatty acid moieties based on its intended function. As to the spacers and linkage, it would also be considered routine experimentation to pick the pertinent spacers and arrangement of cross-linkage based on its intended function.
